

Using KML Position Locator for The Red Thread.

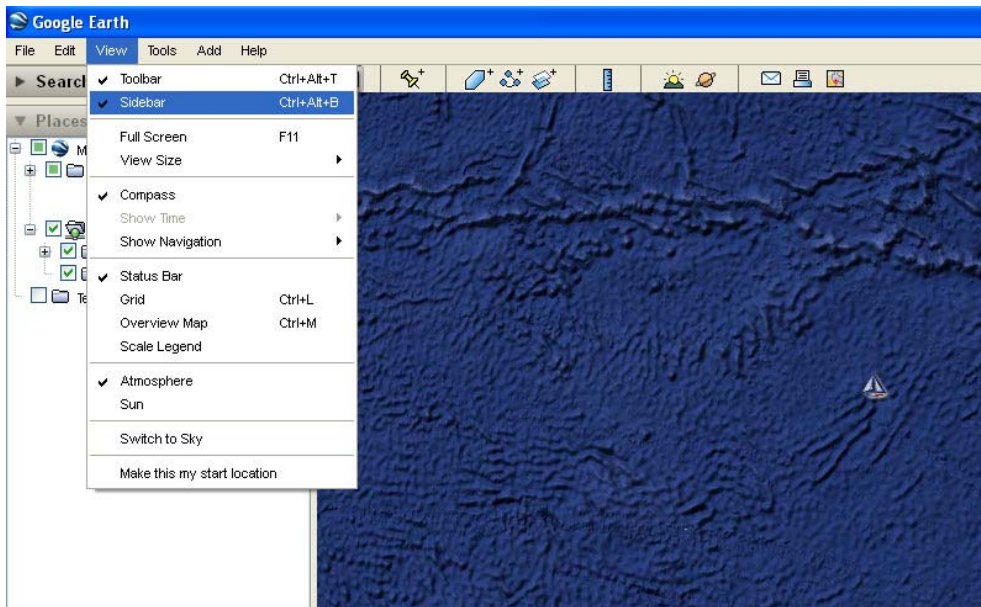

You will need to download and install Google Earth to use the position locator. (If you have google earth installed, skip this step)

1. goto <http://earth.google.com/> and download the latest version of Google Earth.

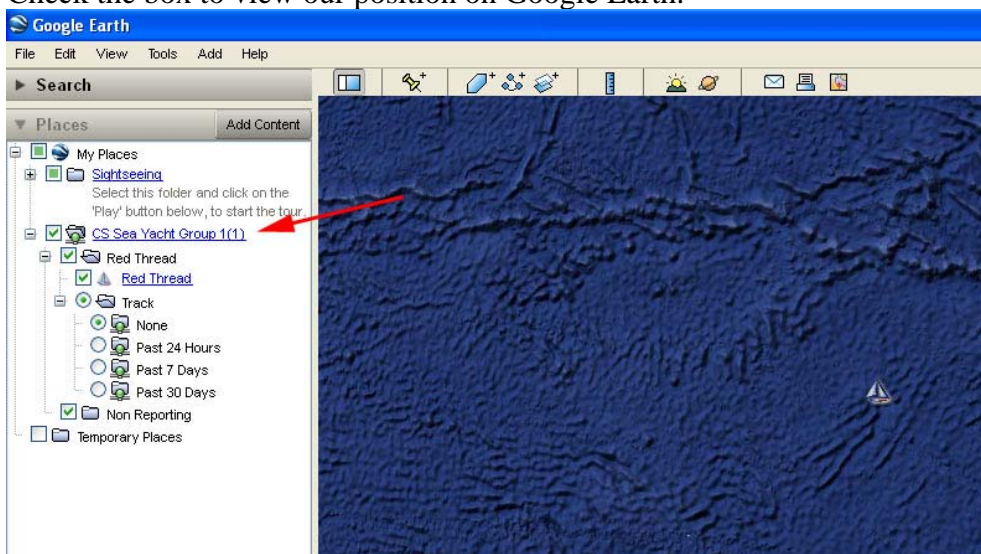

Once you have Google Earth installed, open google earth.

Download the kml file from our website to your desktop. With Google earth running, double click the kml file.

In Google Earth, Make sure your “Sidebar” is open. Click on “View” then “Sidebar”

In the Sidebar under “Places” you will see **CS Sea Yacht Group**. Check the box to view our position on Google Earth.

You will see a small sail boat on google earth. (Currently off the coast of Chile) This is our last reported position. Our position locator is updated every 12 hours.
